

BANDAGE FOR WOUND OR INCISION CLOSURE

Abstract of the Disclosure

Disclosed is a bandage for closing a wound or incision, and methods for the use of same. The bandage comprises a  
5 first flat flexible component having adhesive on a lower surface and one or more first elongated connectors extending in an offset manner from one edge thereof in a first direction. The bandage further comprises a second flat flexible component having adhesive on a lower surface and  
10 one or more second elongated connectors extending in an offset manner from one edge thereof in a second direction generally opposite to the first direction. Pulling elements are joined to the first and second elongated connectors. Means are provided for attaching the first elongated  
15 connectors to the second flat flexible component and the second elongated connectors to the first flat flexible component.
